PRESS RELEASE

Sunnyland Mills Goes Solar

Mike Orlando, Chairman of the Board, announced today that Sunnyland Mills has procured a solar energy generating facility for its plant located in Fresno, CA. Sunnyland Mills is the first company in the U.S. to utilize solar power to make bulgur. According to Mike "Sunnyland started in 1935 using the sun to dry wheat for bulgur. We are going back to our roots by utilizing the energy of the sun to produce our products." HelioPower of Murrieta, CA is the consultant and contractor for the project. Premier Valley Bank located in Fresno provided financing. Sunnyland Mills is a Founding Member of the Whole Grains Council.

The company is AIB certified Superior, QAI certified organic and Kosher Overseers certified. Sunnyland will begin using solar power to produce Organic Kmaut Bulgur and its other products in December 2007. Sunnyland's commitment to the environment includes solar power generation, waste water treatment, dust control and encouragement of environmentally-friendly farming practices.

Sun powered in 1935
